Section: BCS-5B

Task: Sharing files between two Pc's using via LAN cable.

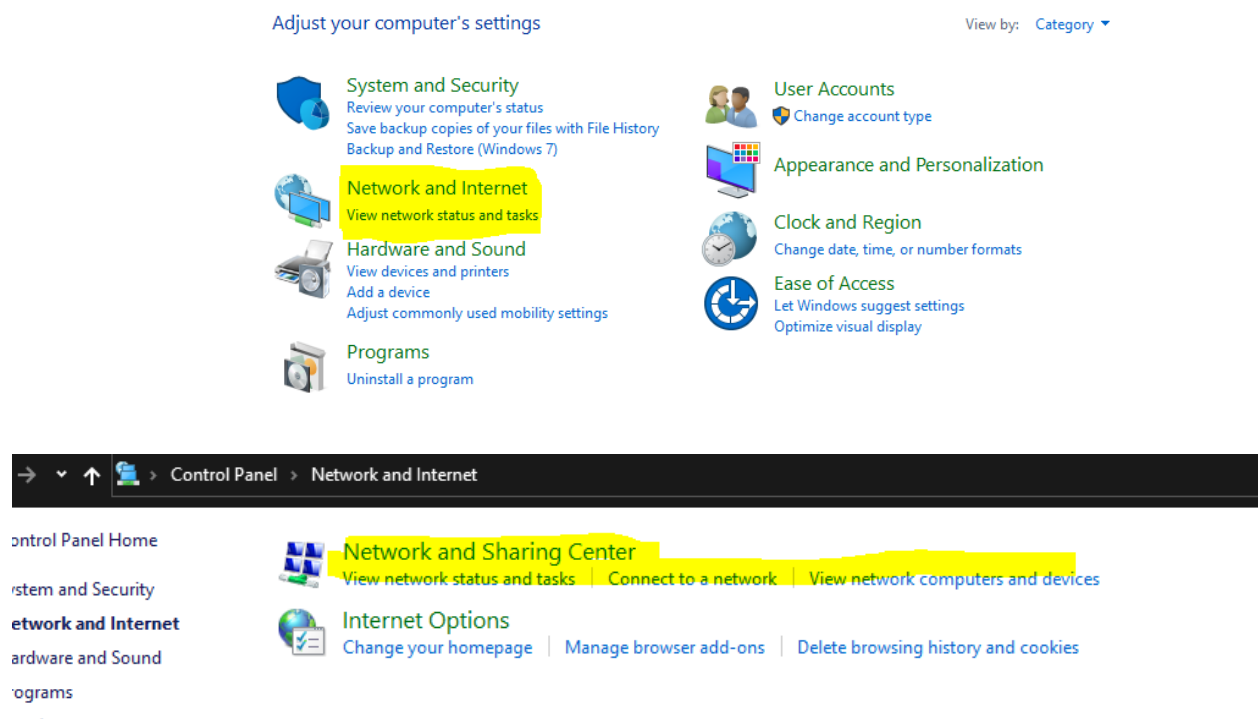

Answer:

Initial Step

First we connect both the PC's with the LAN cable.

First Pc Set-up

Then we open Network and Internet and over there we go to Network and Sharing Center.

Then we go on change advanced sharing settings and turn on sharing.

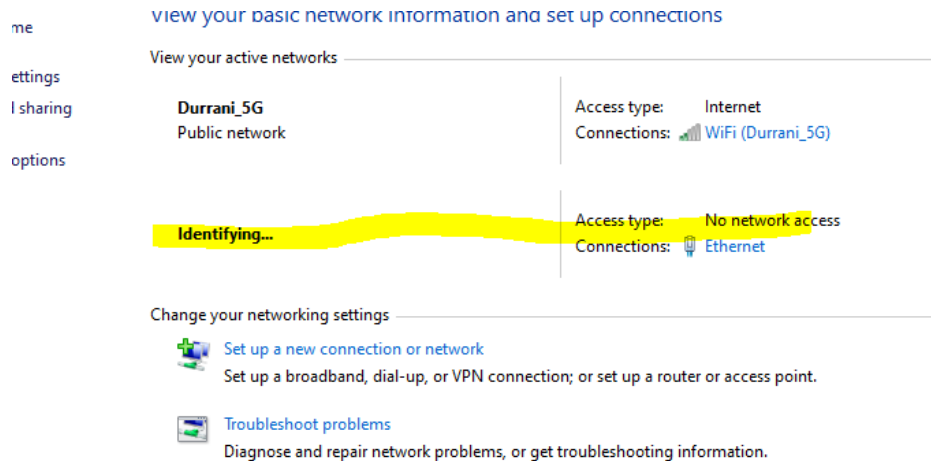

Public folder sharing

When Public folder sharing is on, people on the network, including homegroup members, can access files in the Public folders.

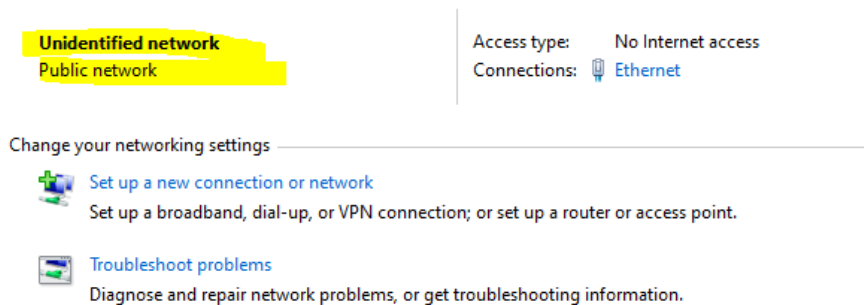

- ☒ Turn on sharing so anyone with network access can read and write files in the Public folders
- ☐ Turn off Public folder sharing (people logged on to this computer can still access these folders)

Media streaming

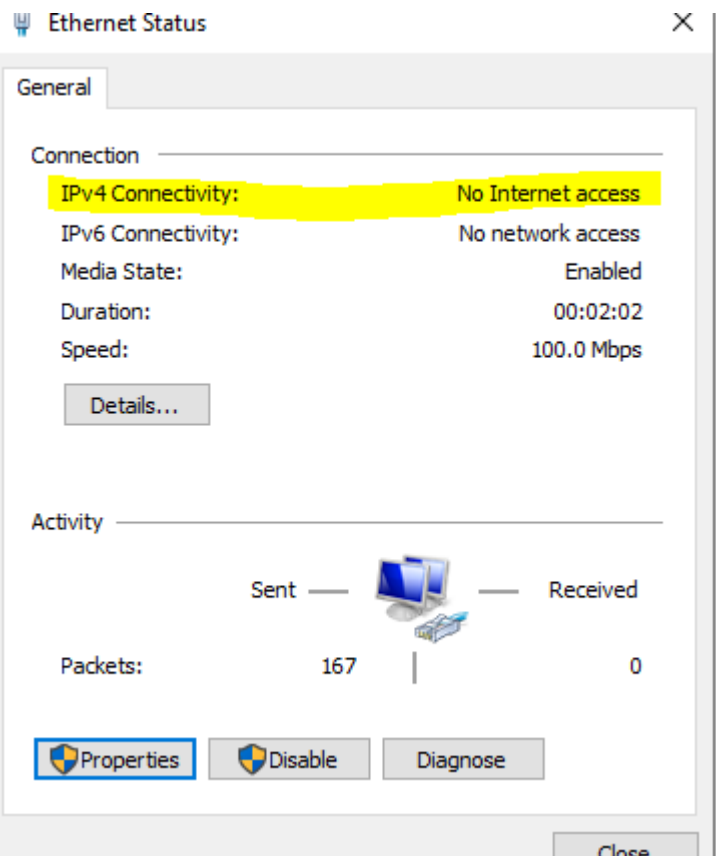

When we connect the both pc we get this interface.

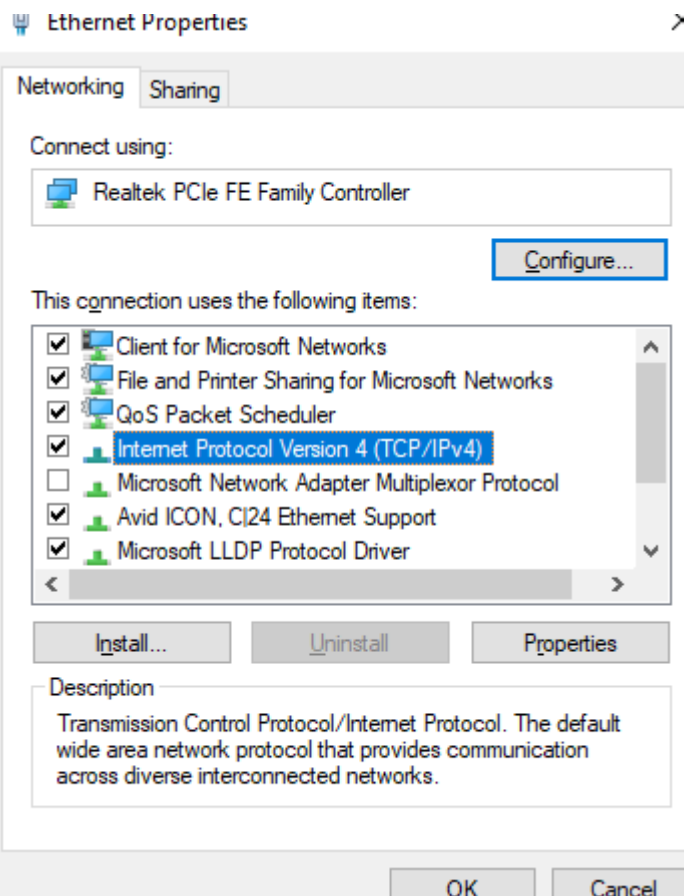

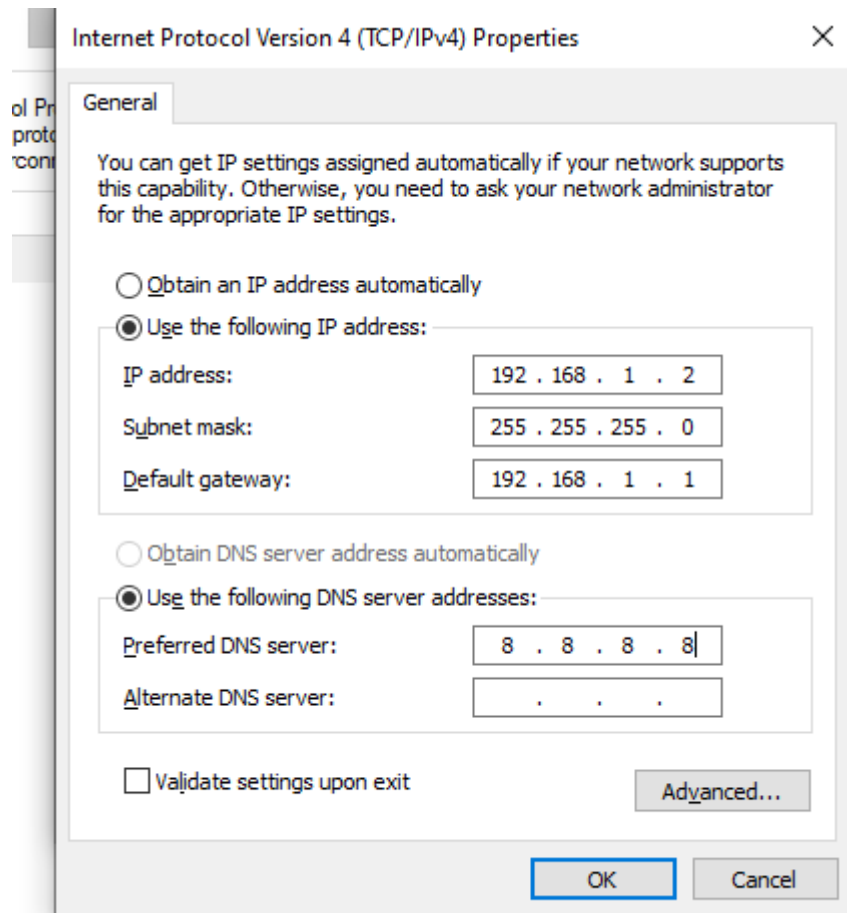

As we can see it is unidentified.

So IPV4 has no internet access.

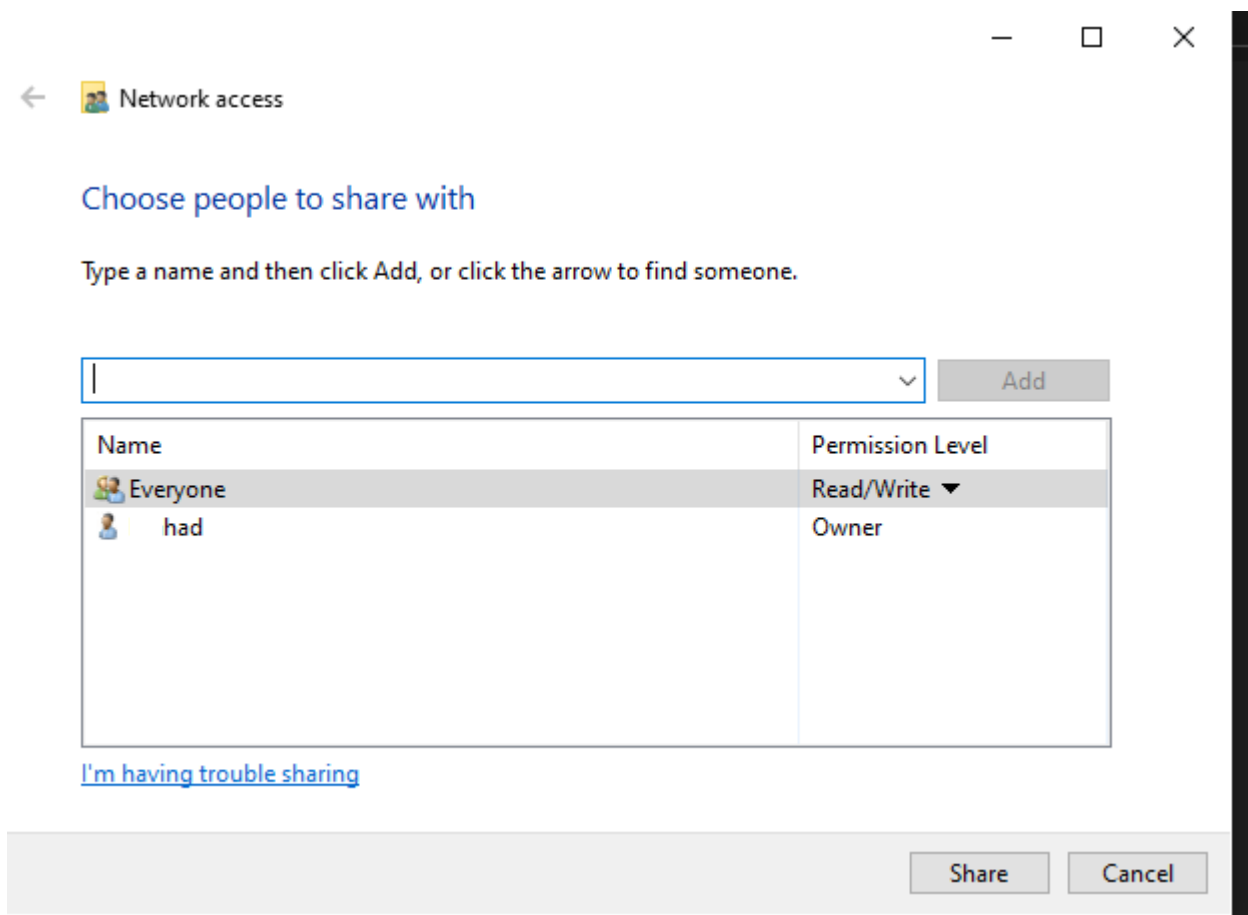

then click on ok and save.

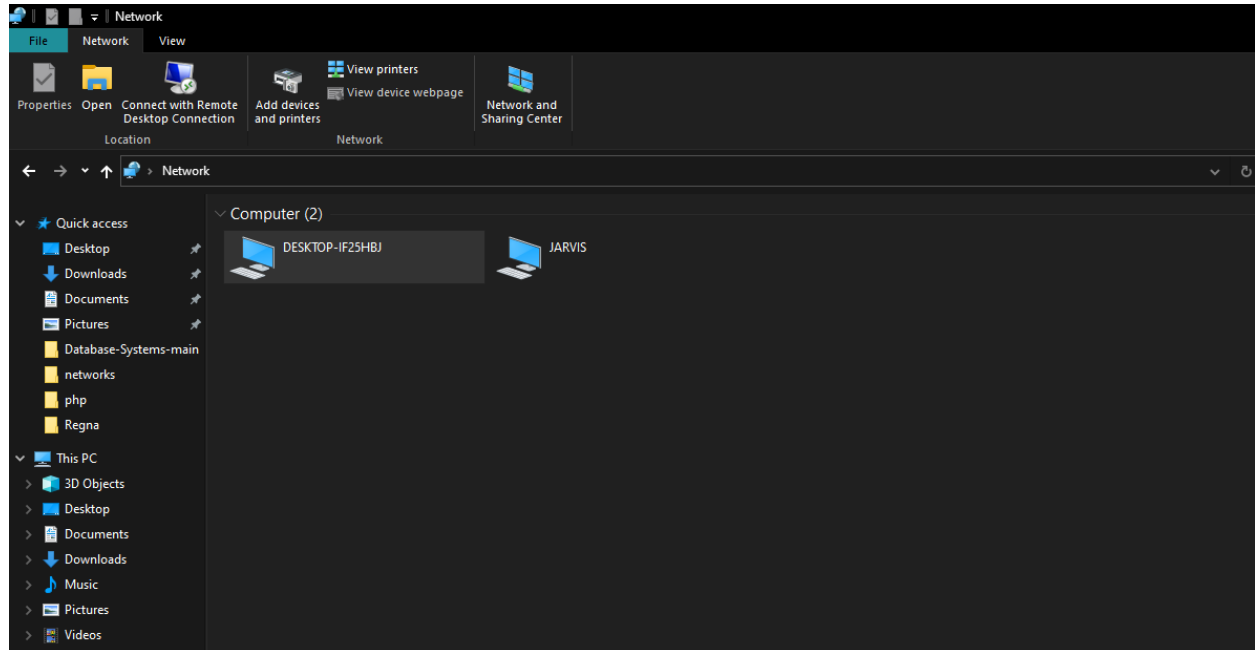

Then we go to Local Disk C and go to users and go to private folder and right click and go on give access to specific people and over there we add everyone and change permission level to read/write

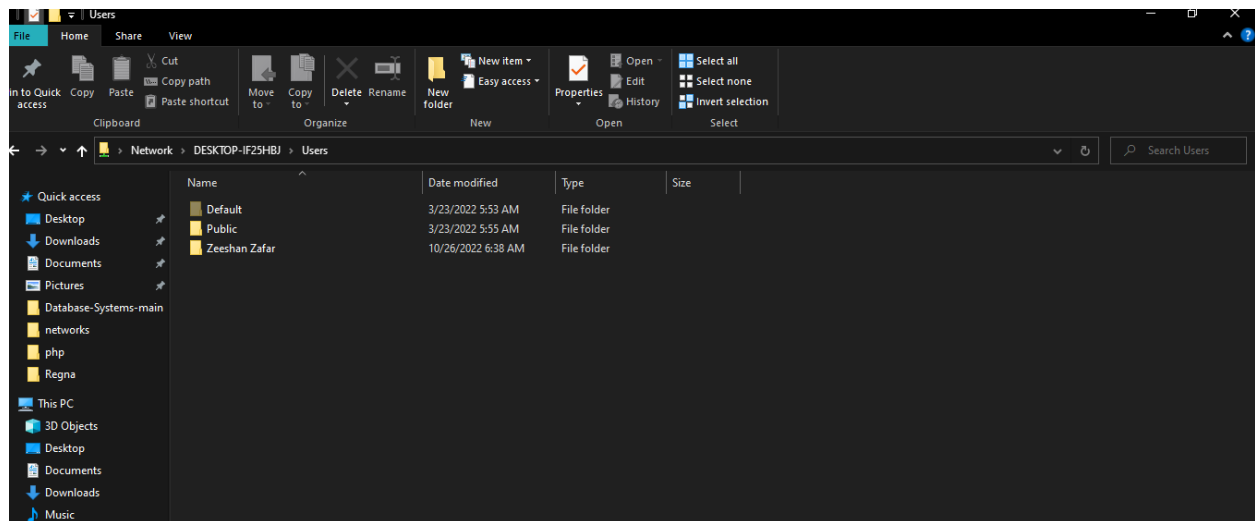

Second PC:

We follow the same steps mentioned above but the difference is we change the IP address and default gateway.

Now we open Network Folder and we can see Two

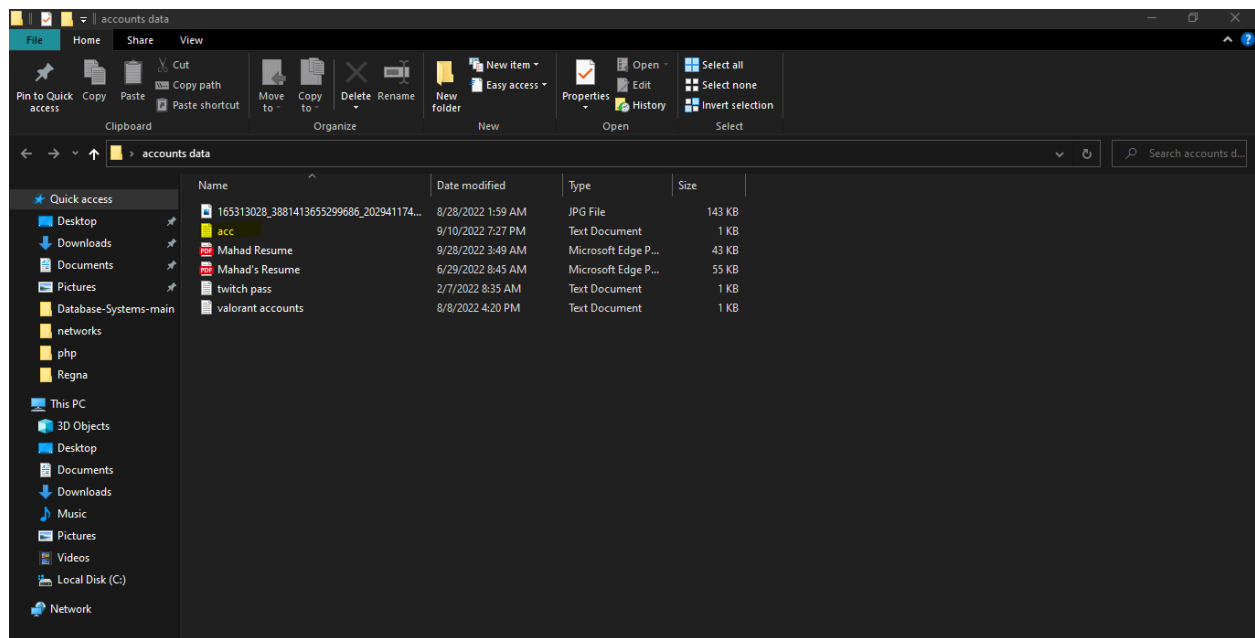

And when we open desktop we see the user name.

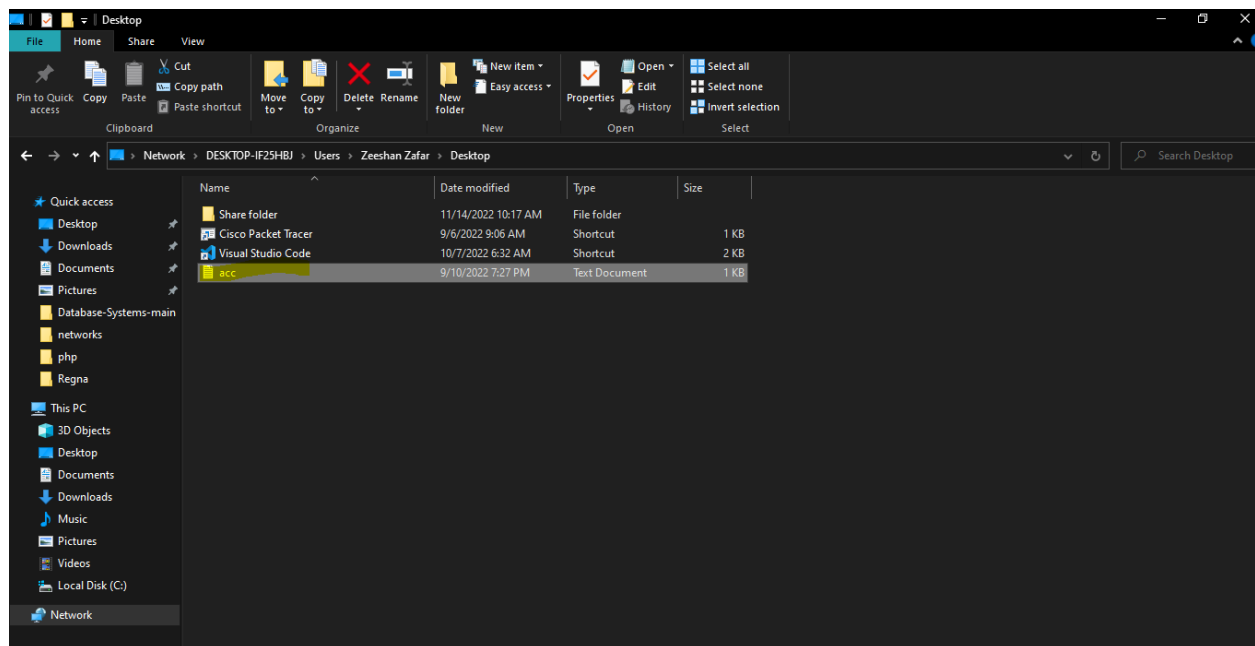

Now **W**e **C**an **S**hare **f**iles:

So we go on pc 1 and go to accounts data folder and copy acc file.

Then we go to networks and go to pc2 user and go Desktop and paste the file.

Second Pc Desktop View:
